Population Genetics and Biodiversity Conservation of Nut Trees

Message from the Guest Editor

The present-day distribution patterns of plant species are the results of complex interactions between biological, physical, and social cultural processes. This is particularly true for nut trees that have experienced human domestication. Monitoring the extant biodiversity is a priority for conservation and breeding programs. This Special Issue on “Population Genetics and Biodiversity Conservation of Nut Trees” aims to improve the knowledge of geographic distribution and germplasm characterization of nut trees. We encourage the submission of original research papers as well as review papers dealing with new advances in tree population genetics, adaptive genetics, landscape genomics, conservation genetics, and breeding.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
