

## Special Issue

# Plant Tissue Culture III

### Message from the Guest Editor

Aseptic culturing of explants such as protoplasts, cells, tissues, or organs in a nutrient media, is enabled through plant tissue culture. This technique has been employed for conservation, plant improvement, regeneration of plants from transgenic or genome-edited cells, production of disease (virus) free plants, production of secondary metabolite, bioactive compounds, and plant mass propagation. Plant tissue culture is also used as a primary platform for understanding plant biology via core specializations. This Special Issue is aimed at covering research on mass propagation, liquid culture, photoautotrophic in vitro propagation, root culture, somatic embryogenesis, gene transformation, and metabolites production.

---

### Guest Editor

Dr. Iyyakkannu Sivanesan

Department of Environmental Health Science, Human and Eco Care Center, Konkuk University, 1, Hwang-dong, Gwangjin-gu, Seoul 05029, Republic of Korea

## About the Journal

### Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, and conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
