Worldwide Evaluations of Quinoa and Amaranth—Biodiversity and Food Security under Climate Change Pressures Volume II

Message from the Guest Editors

After the success of the Special Issue "Worldwide Evaluations of Quinoa—Biodiversity and Food Security under Climate Change Pressures" with 29 published papers, we propose a second volume with the aim of collecting the most recent studies on quinoa underway in various universities and research centers around the world. Thanks to its interesting agronomic and nutritional characteristics, quinoa has in fact gained interest in various countries outside the area of origin where it began to be cultivated and marketed. In addition to quinoa, this Special Issue is also open to works relating to the studies carried out on grain amaranth. Grain amaranth is a herbaceous crop native to Central and South America that, like quinoa, is attracting great interest due to its resistance to abiotic stress and protein quality. About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, and conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
