

## Special Issue

# Plant Nutrient Management for Sustainable Agriculture

### Message from the Guest Editors

The assessment of the nutritional status of plants requires the integration of chemical analyses of plant tissues and soil, which are fundamental tools for the management of sustainable agriculture. This approach allows for the efficient identification of nutritional imbalances and the determination of the most limiting nutrients, whether by deficiency or excess, accurately supporting the recommendations for inputs, such as acidity correctives and fertilizers. Articles addressing concepts related to the interpretation of soil and plant analyses, the definition of nutritional standards, and methods for evaluating the nutritional status of crops are welcome.

## About the Journal

### Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
