Special Issue

Genetic Research on Soybean Response to Adversity Stress and Disease Stress

Message from the Guest Editor

Soybean is the most economically important legume in the world, providing vegetable protein and ingredients for human and animal consumption. Adversity stresses such as temperature extremes, drought, floods, salinity, nutrient deficiencies, and toxicities limit soybean yields. Because of climate change, the frequency and intensity of such environmental stresses are already causing substantial losses in crop production. Diseases and pests also suppress soybean yield around the world. Many resistance genes and quantitative trait loci have been identified against major pathogens and pests. This Special Issue will focus on the latest advances in the understanding of resistance to abiotic and biotic stresses. Submissions of review or original research articles covering, but not limited to, the following themes are welcome:

- Precise, accurate and digitalized phenotypic measurement of responses to adversity and biotic stresses
- Genetic dissection of tolerance to adversity and disease resistance
- Genomic prediction for responses to adverse environments and quantitative disease resistance
- Multi-omics-driven studies focusing on adversity and disease resistance
- Other related subjects

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
