Recent Advances in Genetics, Genomics and Breeding of Vegetable Crops

Message from the Guest Editors

Vegetable crops, one of the components of horticultural crops, play a vital role in people's lives. In the past decade, the rapid development of sequencing technology has made it possible to quickly explore the genome of vegetable crops. However, genomic information has not been fully utilized in the genetic breeding of vegetable crops. This Special Issue on "Recent Advances in Genetics, Genomics, and Breeding of or Vegetable Crops" covers papers on basic and applied research, highlighting fundamental discoveries in the field of genetics, genomics, and breeding which can improve yield and quality as well as resistance to biotic and abiotic stresses.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
