

Special Issue

The Effect of Virus Infections on Fruit

Message from the Guest Editors

The virus or virus-like diseases of fruit crops have a lingering impact that not only affects the yield of the crop for several years but also the time and costs of installing, bringing the plants to production, removing the affected plants, repurposing soil infested with a viral vector, and also the loss of income from other crops that could have been planted instead.

This Special Issue of *Plants* is aimed at compiling both research and review papers, providing an insight into the latest research on the effect of virus infections on all types of fruits, to highlight key advances and outcomes. To this end, we welcome papers related to:

- i) Understanding viral agents' interaction with their hosts that bring about reduced fruit yield and quality;
- ii) Improvement of detection methods for different plant parts (seeds or fruit stones, grafts, rootstocks, seedlings, flowers) suitable to inform policy makers and international legislations concerning worldwide trade of virus-free plant material;
- iii) Identification of new viral agents and viral synergies;
- iv) Economic losses in fruit production.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
