

## Special Issue

# Cell Separation Processes in Plant Development and Environmental Adaptation

### Message from the Guest Editors

During several stages of development and in response to abiotic and biotic stresses it is therefore necessary for plants to modulate their cell walls. In certain cases, such as during the formation of stomata, during the sloughing of root cap cells or during lateral root emergence the remodeling of the cell wall leads to separation of adjacent cells. The process of cell separation is also required during abscission, when entire plant organs that have served their purpose or have been injured or infected are lost, and when fruits and seeds are detached from the mother plant. This Special Issue of *Plants* will focus on cell separation events during plant development, in reproduction and in defense. We welcome articles (original research papers, perspectives, hypotheses, opinions, reviews, modeling approaches and methods) elucidating cell separation processes in different organs of model species and crops from different perspectives, like evolution, genetics, development, biochemistry, and -omic studies.

### Guest Editors

Prof. Reidunn Birgitta Aalen

Department of Biosciences, University of Oslo, N-0316 Oslo, Norway

Assoc. Prof. Melinka A. Butenko

Department of Biosciences, University of Oslo, N-0316 Oslo, Norway

### Deadline for manuscript submissions

closed (31 December 2019)

## About the Journal

### Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
