

Special Issue

Cyanobacteria and Microalgae Biotechnologies

Message from the Guest Editors

Cyanobacteria and microalgae are photosynthetic microorganisms dwelling in various environments with high biodiversity and great capacity to adapt to different environmental conditions. Cyanobacteria are prokaryotic microorganisms, while microalgae belong to the Eukarya domain. Due to their photosynthetic activity, both groups play a fundamental role in biological carbon dioxide sequestration and nutrient cycling. Thanks to their high biodiversity, cyanobacteria and microalgae find a wide spectrum of applications in different fields. Research in this field has recently seen a boost, but this is still an open field searching for innovations in the development of optimal growth systems, the increase of biomass production, the selection and genetic engineering of cyanobacteria and microalgae strains, and the optimization of high-value bio-compound production. This Special Issue on 'Cyanobacteria and Microalgae Biotechnologies' in *Plants* aims to collect research articles and short communications from scientists all over the world to provide an overview of the potential of biotechnologies applied to cyanobacteria and microalgae.

Guest Editors

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
