Diagnosis and Control of Plant Bacterial Diseases

Message from the Guest Editor

Plant pathogenic bacteria represent a major constraint to food production. The economic importance of these pathogens is due to several factors, including the ability to multiply to very high numbers, leading to sudden large and economically important outbreaks. Rapid and accurate methods of detection and identification would allow for preventing and/or to better control such outbreaks. A number of molecular tools have recently been developed for the identification of several plant pathogenic bacteria. However, not all of those tools might be sensitive or specific enough for the early accurate detection of a disease. Most of the commercial products available for the control of bacterial diseases are either antibiotic-type products or heavy metals; they involve the risk of selecting pathogens resistant to these products. For some bacterial diseases, a few biological control agents or elicitors are also available, but their appropriate use requires an understanding of plant physiology and epidemiology, which is not always available. Novel methods of control, such as quorum sensing interference and the disruption of biofilm formation, have yet to be widely studied.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
