

Special Issue

Research on Fruit Viruses and Phytoplasmas

Message from the Guest Editors

Fruit crops remain in their habitats for several years (often decades) and are progressively attacked by various pathogens, including viruses and phytoplasmas. These pathogens cannot be eliminated from plants under field conditions, making the infection a lifelong problem. In addition to the disease and damage, the diseased plant serves as a source of infection. Using molecular techniques such as next-generation sequencing, new viral species are widely discovered. However, their biological significance is often unknown. This Special Issue of Research on Fruit Viruses is therefore devoted not only to the description of new viral and phytoplasma agents, but also to the biological properties of new and known pathogens, the study of their vectors, distribution and economic harmfulness.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
