Peptide Hormones: Roles in Plant Development, Nutrient Responses and Plant–Microbe Interactions

Message from the Guest Editors

Peptide hormones represent a numerous group of plant regulators. They have been shown to regulate different aspects of plant development including meristem maintenance, tissue differentiation, lateral organ formation, and plant–microbe interactions and systemic response to nutrient availability. Peptide hormones are important systemic coordinators of plant growth in response to biotic and abiotic cues since they are capable of long-distance transport through vascular tissues. For instance, CLE and CEP peptides were shown to move through the xylem from the root to the shoot, therefore transmitting information about nutrient availability, water deficiency, and root interaction with soil microorganisms. Bioinformatics and in silico analysis are tools of interest to discover these new peptide families, and the corresponding receptors. The description and methodology to discover peptide families, and their receptors, the description of their action on plant cells, and the signaling pathways triggered by them are in the scope of this Special Issue.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
