Plant-Virus Interactions

Message from the Guest Editor

Phytoviruses are one of the main threats to crops. For sustainable and healthy agricultural production, in-depth knowledge of the close interactions that viruses, obligate intracellular parasites, establish with their hosts will be required. Some, though not all, of the questions that deserve further attention include: (i) Molecular analysis of components, in either the virus or the plant, which affect or modulate plant-virus interactions; (ii) molecular bases of viral pathogenesis; (iii) effects of environmental conditions on the outcome of plant-virus interactions; or (iv) interference of viral infection with host signal transduction pathways. In addition, the potential of viruses to be used as tools for rewiring metabolic pathways or for inducing stress resistance in plants is only starting to be looked at. With the advent of “omic” technologies and, more recently, the development of highly efficient next generation sequencing approaches, together with the continuous improvement of data analysis pipelines, new avenues are opened to shed additional light on the intricate interplay between viruses and plants.

About the Journal

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science, University of Manitoba, Winnipeg, MB
R3T 2N2, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
