

## Special Issue

# Effects of Viticultural Practices and Edaphoclimatic Conditions on Grape and Wine Quality

### Message from the Guest Editors

Variations in temperature, relative humidity, water availability, and UV radiation, among others, may affect vine physiology, productivity, berry quality, and wine typicity. Viticultural practices and edaphoclimatic conditions affect grape and wine quality, and their understanding may provide us valuable information for vineyard management and to define harvesting time.

This Special Issue is opened to a wide range of manuscripts that evaluate the effects of viticultural strategies and edaphoclimatic conditions on vine physiology, berry quality, and wine typicity. Manuscripts covering different topics such as abiotic and biotic stress, vine phenology, bioclimatic indices, selection of vineyard, planting material, training systems, crop thinning, shoot trimming, leaf removal, canopy management, irrigation, plant hormones, and foliar fertilization, among others, are highly invited.

## About the Journal

### Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
