Deadline for manuscript submissions:

closed (1 September 2019)

Message from the Guest Editor

Dear Colleagues,

This Special Issue aims to provide a collection of papers on the fundamental aspects as well as applications of nonthermal plasma jets. These include diagnostics of the jet themselves, their interactions with surfaces, and their use in various industrial and scientific applications. Topics include (but are not limited to):

- Experimental measurements of the various jet parameters (electric field, charge density, reactive species concentrations, etc.)
- Interaction of jets with conducting and dielectric surfaces and with liquids
- Interaction of jets with each other
- Material processing (deposition, etching, ashing, etc.)
- Chemical applications
- Biological applications
- Medical applications
