Deadline for manuscript  
submissions:

**closed (20 May 2022)**

### Message from the Guest Editor

During the past decades, molecularly imprinted polymers (MIPs) have been shown to be an excellent class of modifiers for the design of electrochemical sensors. The Polymers offer the advantage of being easy to design, low cost and have possibility to be designed for different classes of micro and macro molecules. The polymers can be prepared through different approaches that can be chemical or electrochemical depending on the nature of the target template and its physicochemical properties. That is why they were successfully applied for the detection of many classes of analytes including pathogens, heavy metals, wastewater contaminants and pharmaceutical compounds. The current issue aims at shedding light on more recent applications of different classes of electrochemical sensors involving MIPs.

## Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 4.329.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

## Author Benefits

**Open Access:**— free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and many other databases.

**Journal Rank:** JCR - Q1 (*Polymer Science*) / CiteScore - Q1 (*Polymers and Plastics*)
