Polymeric Colloidal Materials for Biomedical Applications

Message from the Guest Editors

The aim of this Special Issue is to highlight the progress and fundamental aspects for the synthesis, characterization, properties, and biomedical application of colloids made of synthetic polymers and biologically-relevant macromolecules, as well as their copolymers and nanocomposites.

Keywords

- Polymeric colloids
- biomedical
- nanoparticles
- polymeric micelles
- liposomes
- solid lipid nanoparticles
- theranostics
Message from the Editor-in-Chief

Since its foundation in 2009, Polymers has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of Polymers, the most recent one being 2.935.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), Scopus (2017 CiteScore: 3.30), Ei Compendex, CAS, Polymer Library, EBSCOhost and Current Contents - Physical, Chemical & Earth Sciences. Citations available in PubMed, full-text archived in PubMed Central.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 16.7 days after submission; acceptance to publication is undertaken in 4 days (median values for papers published in this journal in 2018).
