# Latest Advances in the Study of Smart Hydrogels for Drug Delivery Systems

### Message from the Guest Editors

Hydrogels are reticulated three-dimensional polymeric networks with a high-water absorption capacity that enables them to reach several times their dry weight. Their responsiveness to environmental changes (temperature, pH, magnetic field, enzyme concentration) enables diffusibility control, thus making them a promising tool in the field of medicine for the release of drugs. Hydrogels that change their properties in response to an external stimulus are known as smart materials. In the case of cancer therapy, the macromolecules are usually too large to leak out and accumulate in healthy tissue. However, some of these polymeric networks may have insufficient mechanical strength when subjected to the shear rates of the circulatory system if administered intravenously. The association of a second phase to this class of intelligent hydrogels is an alternative whereby the mechanical strength of the inorganic phase is combined with the responsiveness of the organic one, thus giving rise to compounds with broader applicability. Herein, we aim to provide an overview of the latest research concerning controlled drug delivery using smart hydrogels as a platform for therapy.

## About the Journal

### Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 4.7.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

---

### Editor-in-Chief

Prof. Dr. Alexander Böker

Lehrstuhl für Polymermaterialien und Polymertechnologie, University of Potsdam, 14476 Potsdam-Golm, Germany

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
