

Special Issue

Progress in Geopolymers

Message from the Guest Editor

Geopolymers are a type of inorganic polymer that have been the focus of intense research over the last few decades. Geopolymers have emerged as a promising alternative to traditional cement-based materials due to their superior mechanical properties, durability, and environmental sustainability. This Special Issue aims to provide an up-to-date overview of the latest research on geopolymers. A range of topics is covered, including the use of industrial by-products and waste materials as raw materials, development of new synthesis techniques, and study of the mechanical and durability properties of geopolymers. Also highlighted are potential applications of geopolymers in construction, waste management, and energy storage. The intention with this Special Issue is to provide a platform for researchers to share their latest findings and insights and thereby promote further research and development in the field of geopolymers. We hope that this issue will be of interest to researchers, engineers, and industry professionals working in the field of advanced materials and sustainable construction.

About the Journal

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 4.9.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Alexander Böker

Lehrstuhl für Polymermaterialien und Polymertechnologie, University of Potsdam, 14476 Potsdam-Golm, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
