

## Special Issue

# Recent Advances in Graphene Modified Composites

### Message from the Guest Editors

Polymers are one of the most widely used materials at present, but most polymers still need to be improved in terms of their mechanical properties and electrical and thermal conductivity. Graphene has attracted widespread attention due to its excellent properties, meaning that it represents a new solution for improving polymer properties. Graphene is a two-dimensional sheet material that is extremely thin, has a high specific surface area, and has excellent electrical, thermal, and mechanical properties. The advantages of graphene and its related derivatives have enabled the practical application of graphene-enhanced polymers and composites in various emerging fields such as wearable sensors, electrical and thermal conductive materials, nanofiltration membranes, electromagnetic interference shielding, and energy storage materials. This Special Issue invites authors to submit both original research articles and critical reviews on the most recent progress in graphene modified composites.

## About the Journal

### Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 4.9.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

---

### Editor-in-Chief

Prof. Dr. Alexander Böker

Fraunhofer-Institut für Angewandte Polymerforschung, Lehrstuhl für Polymermaterialien und Polymertechnologie, Universität Potsdam, Geiselbergstraße 69, 14476 Potsdam-Golm, Germany

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPIus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
