Intelligent Active Micro/Nanoscale Matter for Smart Applications

Message from the Guest Editors

The minimization of intelligent devices to the micro- and nanoscale may provide considerable applications due to their significant potential in various fields ranging from biomedicine to precise analysis. Swimming micro-/nanorobots, which enable actuations in various aqueous media such as water and blood, have attracted the attention of researchers with the vision of the transportation of therapeutic agents into hard-to-reach areas in the body for the targeted therapy of disease. As fancy as the idea sounds, today, people are equipped with a plethora of nanotechnology to realize the microrobot stories in science fiction. We hope that this Special Issue will open new doors for the design of these tiny robots.

About the Journal

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 4.7.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Alexander Böker

Lehrstuhl für Polymermaterialien und Polymertechnologie, University of Potsdam, 14476 Potsdam-Golm, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
