Sustainable Polymer Composite Adsorbents: Preparation, Characterization and Applications

Message from the Guest Editor

Polymers and their composites have contributed significantly to the field of adsorption science and technology. Polymers can range from synthetic systems such as polyethylene glycol, polyacrylamide, and polystyrene to diverse natural polymers, e.g., starch, cellulose, chitin, and chitosan, that are accompanied by unique structural and functional properties. In an effort to achieve sustainability goals related to water, food, energy, and health, the role of adsorbents needs to be demonstrated. In an effort to develop improved adsorbent materials, polymers and polymer composites are envisaged to contribute to this goal due to their structural diversity and multi-functional properties. Colleagues are invited to contribute original research papers and critical reviews addressing recent progresses on all aspects of innovative adsorbents that address advances in the field of adsorption science and technology. Topics that highlight developments based on unique and innovative adsorbents derived from polymer composites and that include the synthesis, characterization, structure–function relationships, and applications are welcome to be submitted.

About the Journal

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 4.7.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Alexander Böker

Lehrstuhl für Polymermaterialien und Polymertechnologie, University of Potsdam, 14476 Potsdam-Golm, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
