Special Issue

Biobased and Biodegradable Polymer Blends and Composites

Message from the Guest Editors

There is a growing interest towards biobased polymer and biocomposite development in order to obtain more sustainable and eco-efficient products. In particular, the increasing preoccupation caused by the disposal of conventional plastics has pressed researchers towards the development of new biobased and/or biodegradable blends and composites that are able to replace fossil-based products in different sectors. However, the modulation of the starting biopolymer thermomechanical properties is fundamental to reaching the thermal, mechanical, and, in some cases, barrier properties required by the different fields of application in which these bioplastics can enter into the market. For this purpose, an economical and convenient strategy for developing new polymeric formulations is the blending technique in which it is possible to combine the physical and mechanical advantages of different polymers. Nevertheless, the addition of natural fibers can be an efficient solution, not only to reduce the cost of the biopolymeric matrix but also to promote the biodegradability.

About the Journal

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 4.7.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Alexander Böker
Lehrstuhl für Polymermaterialien und Polymertechnologie, University of Potsdam, 14476 Potsdam-Golm, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
