Special Issue

Flame-Retardant Polymer Composites II

Message from the Guest Editors

Flame-retarded polymer composites can be obtained via various processing routes, such as injection molding, thermo compression or additive manufacturing (AM). Recently, the utilization of AM has expanded the applicative potential of polymer composites because it enables the production of extremely complex parts. However, some composites are not suitable for AM due to the specificities of these technologies. Furthermore, some additives are prone to affecting the functional properties of the composites, regardless of the processing route. Thus, composites and additives should be carefully selected in order to avoid problems during processing, and effective flame-retardant systems should be chosen or developed in order to meet the requirements of the new applications. Hence, this Special Issue aims to identify the most recent scientific advancements in the flame retardancy of polymer composites processed through various routes, as well developments in the characterization of the flame retardancy mechanism.

About the Journal

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 4.7.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Alexander Böker
Lehrstuhl für Polymermaterialien und Polymertechnologie, University of Potsdam, 14476 Potsdam-Golm, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
