

Special Issue

Polymer Materials for Agricultural Application II

Message from the Guest Editors

Polymer materials are inputs that support the development of more sustainable and resilient agricultural systems. Granular fertilizers benefit from coatings with biodegradable polymers when promoting controlled release. Biopolymers, such as proteins, polysaccharides, and lignin, act as formulation ingredients for plant biostimulants. Most of these biopolymers, especially in their nanoforms, are also active ingredients or precursors of active ingredients—e.g., bioactive peptides, lignin derivatives, or oligosaccharins acting on the tissular and cellular plant regulatory network. Several polysaccharides (chitin/chitosan and polysaccharides from yeast or (micro)algae cell wall) were registered as active ingredients of low-risk plant protection products. Other agricultural applications of polymer materials include seed coating, film-forming formulation for extended fruits and vegetables shelf life, enhancers of water-holding in soil, and biodegradable mulch film. This Special Issue welcomes original articles, communications, reviews, and perspectives on the applications in the agriculture of polymer materials.

About the Journal

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 4.7.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Alexander Böker

Lehrstuhl für Polymermaterialien und Polymertechnologie, University of Potsdam, 14476 Potsdam-Golm, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
