Special Issue

Poultry Infectious Diseases

Message from the Guest Editors

Poultry meat and eggs are the most consumed animalbased protein by humans worldwide, while poultry infectious diseases represent a significant constraint to limiting commercial production, and have negative impact on animal welfare and food safety. The landscape of poultry diseases is very dynamic due to changes in husbandry practices, national and international legislations as well as biological complexity of pathogens. Thus, enhancing scientific knowledge to promote poultry health is crucial to meet the growing demands of poultry derived protein. This Special Issue focuses on poultry infectious diseases, including viruses, bacteria, fundi, and parasites under field or experimental conditions. Research articles and literature reviews covering microbiology, immunology, vaccines, pathology, epidemiology, prevention and control, and diagnostic methods of infectious diseases are welcome.

About the Journal

Message from the Editor-in-Chief

Poultry is a newly established, online, open access journal that aims to publish high-quality research on topics in various areas of poultry production and health. This research should reflect the eminent and increasing importance of all poultry species reared for human nutrition. Poultry adheres to rigorous peer-review and editorial processes. Containing specialists from different areas in this field of research, the Editorial Board enthusiastically works to safeguard the quality of the review process and your contribution. A dedicated support team from the publisher is available, when required, to offer help and support for specific requests. Equipped with such a wide breadth of knowledge and expertise, Poultry should be the landmark for research on poultry science.
