Message from the Guest Editors

Dear Colleagues,

Nowadays, more and more consumers worldwide look for healthy foods or products with fewer or no "artificial" additives. Therefore, the food industry faces the challenge of adapting its processes to meet market requirements. Scientists worldwide have addressed this problem by exploring natural compounds that could be used in food processes such as microencapsulation, extrusion, thermal and non-thermal treatments, high pressures, etc. These compounds include saccharides, proteins, enzymes, vitamins, lipids, polyphenols, colors, flavors, antimicrobials, and antifungals. Furthermore, various natural sources have been studied for extracting bioactive compounds, for instance, plants, fungi, insects, microbes, and animals. We also recognize the current tendency to explore endemic sources and agro-industrial byproducts as a source of valuable bioactive compounds with potential use in the food industry.

In this context, we invite authors to contribute to this Special Issue by providing original research articles and reviews related to recent advances in the extraction of natural products and their potential use in food processes.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
