submissions:

closed (30 April 2024)

Message from the Guest Editors

Numerical analysis developed into a crucial tool for the understanding of heat transfer and fluid flow properties in various engineering applications. This topic encompasses computational approaches, numerical tools and methods for the heat and mass transfer problems, single- and multi-phase fluid flow, nanofluidics, and phase change phenomena. The goal is to develop reliable and experimentally validated numerical approaches that can be used for the optimization of the thermal-hydraulic performance of heat exchangers, heat pumps, turbomachinery, HVAC&R components, renewable energy systems, internal combustion engines, and energy conversion.

This Special Issue is open to original research articles using computational approaches, numerical tools and methods for the investigation of heat transfer and fluid flow in engineering applications. Review articles about the latest developments and research efforts in this field are also welcome.

an Open Access Journal by MDPI

Technology, University of Turin,
Via P. Giuria 9, 10125 Turin, Italy

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
