# **Chemical Process Modelling and Simulation**

Guest Editor:

#### Dr. Tamás Varga

Department of Process Engineering, University of Pannonia, H-8200 Veszprém, Hungary

Deadline for manuscript submissions:

closed (30 April 2024)

## Message from the Guest Editor

Modeling is a tool for understanding reality. We should never forget that the model is always just a projection of the real system so the reliability of the model should be quantified before it is applied in a practical problem solution. In modern chemical industry processes, modeling and simulation are a crucial pillar of day-to-day operations from design to maintenance and control of chemical process technologies. Today, the modeling task in the chemical industry often requires dynamic process modeling and simulation to follow the transient behavior of the system. Next to this, to obtain more information about the real system, we need more complex models than earlier, which makes it possible to identify that hidden capacity in process units which can improve the performance of the whole system. As model complexity is increasing, the numerical solution methods should be improved in order to solve models with sufficient precision.

All work related to chemical process modeling and simulation is welcome in this Special Issue to offer insight to the future readers into the current state of this wide topic.

## **Message from the Editor-in-Chief**

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus,

SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous*))
