Message from the Guest Editors

The aim of this Special Issue is to explore recent technological developments in adaptive control (design methods and theoretical analysis), especially for nonlinear stochastic processes such as robotic systems, manufacturing systems, transportation systems, power systems, chemical systems, and more.

Research areas may include (but are not limited to) the following:

- Model reference adaptive control;
- Self-tuning adaptive control;
- Multiple model adaptive control;
- Intelligent adaptive control;
- Robust adaptive control;
- Adaptive sliding-mode control

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.
