The specific program covered the following sections:

1. Basics

- Catalytic Membrane Reactors (one-phase and multiphase systems).
- Catalytic Membrane Reactors (with catalytic membranes) vs. Inert Membrane Reactors (with inert membranes).
- Catalysts and membrane design for process intensification.
- Modelling and simulation for process optimization.

2. Applications

- Large-scale membrane reactors and membrane techniques integrated with industrial processes.
- Photocatalytic membrane reactors and membrane reactors utilizing other advanced oxidation processes.
- Electrochemical devices and transport applications of membrane reactors (fuel cells, electrolyzers, electrochemical synthesis, etc.).
- Membrane bioreactors in wastewater treatment and biotechnology (cells and enzymes).
- Other membrane reactor applications (e.g., artificial organs and tissue engineering, etc.).

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.
