Message from the Guest Editors

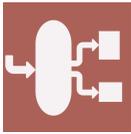

Dear Colleagues,

Coastal areas are critical zones connecting terrestrial and marine ecosystems. The overload of Nr drives eutrophication, hypoxia and the release of nitrous oxide, which are the greatest threats to coastal ecosystems worldwide. However, our knowledge about the microbial N transformation processes and their response to increased environmental pressures and anthropogenic interference in coastal ecosystems is still limited.

This special issue on “Nitrogen cycling processes in coastal ecosystems” provides a platform to highlight new research and advances related to the N cycling processes of these anthropogenically highly influenced coastal ecosystems. Specifically, themes of the research and review papers of the current issue could include (but not be limited to):

- Coastal N cycling biodiversity
- N transformation rates and flux
- Metagenomic and metatranscriptomic properties of microbial community
- Novel N cycling microorganism, process, and methodology
- Microbial response to anthropogenic interference

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: CiteScore - Q2 (Chemical Engineering (miscellaneous))
