Deadline for manuscript submissions:

**closed (31 March 2024)**

### Message from the Guest Editors

Studies reveal that quorum sensing is closely related to biofilm formation, sludge granulation, and pollutant removal. However, the critical roles of bacterial quorum sensing in sludge community reconstruction, emerging contaminants removal, and carbon resource capture via the adsorption biodegradation process are only beginning to unravel.

Contributors are welcomed to submit reviews and original research articles, including but not limited to the following topics:

- Quorum sensing bacterial and signals identification;
- Quorum sensing and quenching in activated sludge community construction, including biofilm formation and sludge granulation;
- The role of QS in biological emerging pollutants removal and activated sludge carbon capture;
- Quorum sensing and quenching in sludge bulking;
- Quorum sensing signal-response in pollutants removal and resources recovery by microalgae;
- Cell-to-cell communication across the prokaryote-eukaryote boundary.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Processes* (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
