Deadline for manuscript submissions:
15 November 2021

Message from the Guest Editors

This Special Issue on “Advances in Food Packaging Technology” focuses on the latest research and development in this area. We target specifically the development and application of novel and sustainable packaging solutions and how computational modeling and multi-criteria performance evaluation can help advance innovative packaging technologies by providing new insights for product design and process optimization. Contributions covering packaging solutions for a wide range of food production and supply chains are most welcome, including bulk/logistics packaging and retail/consumer packaging for fruit and vegetables, grain, meat, poultry, and dairy. In addition, review papers providing critical overviews of state-of-the-art developments on packaging research are welcome.
Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.
