Message from the Guest Editors

This Special Issue on “Modeling and Control of Fuel Cells” aims to compile together novel advances in the development and application of computational modeling to address these longstanding challenges of these fuel-cell systems. Topics include, but are not limited to, the following:

- The development of improved modeling methods for fuel cells;
- The development of advanced systems identification and observers in fuel-cell systems;
- The development of advanced control strategies for fuel cells;
- Optimization of the fuel-cell system, especially in cogeneration systems; and
- Online validation of modeling and control techniques developed for fuel-cell system.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/systems related research in chemistry, biology, materials and allied engineering fields. Our goals are to publish high impact articles of broad interest to the process systems community and to serve as a forum for major developments in process/systems research. The journal publishes regular research papers, communications, letters, short notes, and reviews. There are no restrictions on the length of published articles or on the use of color illustrations. All submitted manuscripts undergo rigorous peer review prior to publication.

Author Benefits

Open Access:—free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: Indexed in the **Science Citation Index Expanded** (Web of Science) and **Inspec (IET)**. Covered in **Scopus** from Vol. 5 (2017).

CiteScore (2019 Scopus data): **1.8**.
