Application and Development of Ultrasonic Technology in Food Processing

Message from the Guest Editors

Ultrasound has various applications in food processing due to its ability to induce physical, chemical, and mechanical changes in food materials. The use of ultrasound has a positive effect on the sensory evaluation of products and their nutritional value, generating lower energy costs and shorter processing times. Ultrasonic processing is an alternative to the conventional thermal methods used during pasteurization and food preservation. Ultrasonic technology is also used as an alternative to conventional freezing, thawing, and drying. Ultrasonic treatment is likewise used when extracting bioactive substances from raw plant materials. One more important topic is the use of ultrasound to wash fruits and vegetables. This Special Issue aims to publish original scientific articles and review articles devoted to the use of ultrasonic technology in food processing. Another important issue is the effects of ultrasound on the composition, quality, and safety of foods and by-products. The use of ultrasound in the food industry requires the use of appropriate devices, including large-scale ultrasonic reactors, which are also the subject of this Special Issue.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
