Special Issue

Energy Production Based on Heterogeneous Catalysis

Message from the Guest Editor

Heterogeneous catalysis has undergone revolutionary advancements because of the goal of efficient and sustainable energy production. The crucial part that heterogeneous catalysis has played in developing energy generation will be explored in this Special Issue. Original research articles and potential reviews based on heterogenous catalysis are the focus of this Special Issue. A game-changing solution for addressing the world's energy crisis is heterogeneous catalysis, a method that uses catalysts to speed up chemical reactions at the interface of many phases (such as solids, liquids, and gases). The main goal of this Special Issue is to shed light on the fundamental elements of energy production based on heterogeneous catalysis and highlight its potential to completely alter the energy landscape.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto
Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
