Corrosion Processes of Metals: Mechanisms and Protection Methods

Message from the Guest Editors

Corrosion of metals is one of the most important problems in different industries, such as automotive, naval, chemical, biomedical, aerospace, construction, and electronics. The correct protection method is vital to increasing materials' performance in different environments. The environment plays an essential role in selecting protection methods, with protection methods varying from passivation, anodizing, corrosion inhibitors, cathodic protection, current methods, advanced coatings, and HVOF or plasma. The correct selection of coating equates to significant savings for different industries, so it is essential to determine if protection should be organic, inorganic, metallic, ceramic, or hybrid. Moreover, understanding the corrosion mechanism that acts in different protection methods is helpful. This Special Issue outlines different trends in corrosion science, electrochemicals, engineering, simulation, and technology, presenting a multidisciplinary perspective to abord the problem better.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
