Modeling of Interfaces and Surface Microfluidics

Message from the Guest Editor

Microfluidic devices can be used in many applications, such as biomedical or biological analysis or during water cleaning and purification. As the related experiments are not easy to perform at the microscale and they are relatively complex, modeling and simulation are important in the facilitation and acceleration of microfluidic device designs, such as MEMS. Surfaces play an important role at the microscale as they can affect flows. A considerable amount of research has been carried out regarding surface modification in microfluidic designs, as it can affect the flowrate through slip based on a surface's hydrophobicity/hydrophilicity or assist with ion separation in other cases. Functionalization is another important area of research. Several methods are employed in modeling, such as molecular dynamics and dissipative particle dynamics, to name a couple.

- The multiscale modeling of surfaces and interfaces in microfluidics;
- Complex hydrophilic and hydrophobic surfaces;
- Applications of modeling in biological fluid devices;
- Applications in desalination and water purification using microfluidic devices;
- Membranes made from micropores.

Guest Editor

Prof. Dr. Theodoros Karakasidis

Department of Physics, University of Thessaly, Lamia, Greece

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
