Modeling and Optimization of Gas-Solid Reaction Vessels

Message from the Guest Editors

Gas–solid reaction vessels (e.g., fluidized beds, fixed beds, moving beds, etc.) are widely used in many industrial areas, such as chemical engineering, power engineering, or metallurgy. Reactor modeling, a powerful tool for understanding the performance of the process via simulating operating conditions outside the experimentally tested ranges, has increasingly developed into an irreplaceable part of the design, scale-up, and optimization of different reaction systems. Recently, modeling reaction vessels with sophisticated geometrical configurations and complex chemical reaction systems are also becoming feasible with the development of numerical methodologies and computational facilities. This Special Issue of Processes, “Modeling and Optimization of Gas-Solid Reaction Vessels” aims to present the latest achievements in modeling associated with various gas–solid reaction vessels. Modeling topics include but are not limited to hydrodynamics, heat and mass transfer, looping processes, energy conversion and storage, combustion and gasification, pollution control, CO₂ capture, and other technologies associated with the gas–solid reaction vessels.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto
Department of Drug Science and Technology, University of Turin, Via P.
Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
