Special Issue

Physicochemical, Thermal, Sensorial, Nutritional, and Flow Properties During Food Processes

Message from the Guest Editors

Food processing is crucial in protecting food products from alteration while also shaping their novel physicochemical and textural features. Operations such as dehydration, heat treatment, extrusion, encapsulation, and crystallization are involved. The physicochemical, thermal, flow, and sensory characteristics of foods play a significant role in determining the quality of the end products. Precise measurement of these attributes is prominent for both design and quality assurance. Every single type of food requires a unique set of characteristics. Consequently, ensuring a wide diversity of foods while maintaining their safety and unique sensory and nutritional characteristics to meet consumer demand implies strict and consistent food processing. This Special Issue explores "Physicochemical, Thermal, Sensory, Nutritional, and Flow Properties of Foods During Food Processes" and examines changes in the physicochemical, thermal, sensorial, nutritional, and rheological properties of foods during processing.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: CiteScore - Q2 (Chemical Engineering (miscellaneous))
