Optimizing Metal Extraction Processes: Recent Advances in Leaching Technology

Message from the Guest Editor

Metal extraction processes are becoming more and more environmentally friendly, as techniques are used that do not result in the level of pollution caused by previous processes. In recent decades, clean extraction processes have been proposed, which are efficient and have high recovery percentages. Sustainable mineral leaching processes are widely researched by different scientists, as they seek a reduction in water consumption and in the use of reagents that are aggressive to the environment, as well as processes with higher recovery percentages. Improvements to the leaching processes already used can also be an alternative to improve metal extraction in an environmentally friendly way. This Special Issue, “Optimizing Metal Extraction Processes: Recent Advances in Leaching Technology”, seeks high-quality works focusing on the latest novel advances in metal extraction processes. Topics include, but are not limited to, the following:

- Recent leaching technology;
- Sustainable metallurgy processes;
- Extractive metallurgy processes;
- Environmentally friendly leaching processes.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
