

Special Issue

New Processes, Methods, and Challenges in Cork Composites Manufacturing

Message from the Guest Editors

Cork finds its main application as a raw material in the manufacturing of cork stoppers. Nevertheless, cork's overall properties and sustainable characteristics have triggered its application and research in composite materials. Cork is being combined with several other materials, using different processes in order to achieve high performance, improve its recycling, improve the sustainability of the material or application, etc. Therefore, several research groups and entities are searching for alternative materials, incorporating cork in their composition, optimizing its manufacturing processes and introducing new forms of processing this material to obtain desired functions of the composite or simply consume fewer resources or energy. In recent years, the field of cork composites has been significantly advanced: new materials/structures, new processes to fabricate composites, and advanced functionalities have been achieved. This Special Issue aims to provide an up-to-date picture of recent advances in cork composites, particularly current challenges.

Guest Editors

Dr. Fábio Fernandes

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto
Department of Drug Science and Technology, University of Turin, Via P.
Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
