Modeling of Combustion and Fuel Reforming by Non-equilibrium Plasma

Message from the Guest Editors

With the increasing severity of global warming and pollutant emission, the renewable energy from solar, wind and hydroenergy plays a more important role in the world energy. Non-equilibrium plasma generated from renewable electricity provides a promising technology to improve combustion efficiency, reduce emissions and store renewable energy. It has shown remarkable advantages not only in enhancing ignition, extending flammability and flame stabilization limits, accelerating low temperature fuel oxidation, but also in converting fuels and CO₂ into valuable chemicals. Numerical modeling is a helpful approach and has been frequently used to understand and illustrate the underlying physical-chemical process of plasma assisted combustion and fuel reforming, as well as developing plasma applications. The advances in computer science and computational ability also promise to help accelerate the development of modeling in combustion and plasma science. The topics in this Special Issue include, but are not limited to, kinetic model development, multi-scale modeling, and advanced computational technology for plasma-assisted combustion and fuel reforming.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Chemical) / CiteScore - Q2 (Chemical Engineering (miscellaneous))
