

Special Issue

Supercritical Fluid Technology and Its Applications in Separation Processes

Message from the Guest Editors

This Special Issue is dedicated to exploring the advancements and applications of supercritical fluid technology, an area that continues to revolutionize separation and transformation processes in industry. Supercritical fluids offer innovative and sustainable solutions to various industrial challenges, owing to their unique properties, which combine the characteristics of liquids and gases.

- The scope of this Special Issue covers topics such as the extraction of natural products using supercritical fluids. We also explored the application of supercritical water in gasification and oxidation processes, offering new perspectives for waste treatment and clean energy generation. Another focus is the study of the phase equilibrium in pressurized systems with supercritical fluids, which is essential for developing more efficient processes.
- By combining cutting-edge research and case studies, this Special Issue aims to provide a comprehensive and updated view of the potential of supercritical fluids, serving as a valuable resource for researchers and industry professionals interested in exploring and applying this innovative technology.

Guest Editors

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
