Activated Carbon in Contaminant Removal

Message from the Guest Editors

Activated carbon has been successfully applied for the removal of organic and inorganic contaminants for several decades, and advancements in activated carbons are similarly occurring. Worldwide, environmental regulations are tightening, and activated carbon is commonly the best available technology for these applications. One particular class of compounds include perfluorooctanoic acid (PFOAs), and perfluorooctanesulfonic acid (PFOS) is of particular interest, while pharmaceuticals, inorganics such as mercury, and taste- and odor-causing compounds likewise are globally present. This Special Issue on “Activated Carbon in Contaminant Removal” seeks high-quality works focusing on recent applications of activated carbons, particularly addressing the compounds listed above. Topics include but are not limited to:

- Comparisons of activated carbons from different raw materials;
- Impacts of thermal reactivation on subsequent adsorption;
- Theoretical modeling to predict adsorption;
- Advancement in activated carbon characterization.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
