Characterization of Emissions from Fuel Combustion

Message from the Guest Editors

Briefly, emissions are an issue in all described cases. Topics include, but are not limited to:

- Reduction of NO_x by primary and secondary measures for the combustion of “advanced fuels” like hydrogen, ammonia
- Release, analytics, sampling of PFAS in flue gases from combustion of fluorinated wastes, balancing the process (fluorine)
- Strategies to avoid emissions from PFAS into the environment
- Processes for energetic recovery and feedstock recycling of carbon reinforced fibres: analytics, balances and strategies

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.
