Chemical Process Modelling and Simulation

Message from the Guest Editor

Modeling is a tool for understanding reality. We should never forget that the model is always just a projection of the real system so the reliability of the model should be quantified before it is applied in a practical problem solution. In modern chemical industry processes, modeling and simulation are a crucial pillar of day-to-day operations from design to maintenance and control of chemical process technologies. Today, the modeling task in the chemical industry often requires dynamic process modeling and simulation to follow the transient behavior of the system. Next to this, to obtain more information about the real system, we need more complex models than earlier, which makes it possible to identify the hidden capacity in process units which can improve the performance of the whole system. As model complexity is increasing, the numerical solution methods should be improved in order to solve models with sufficient precision. All work related to chemical process modeling and simulation is welcome in this Special Issue to offer insight to the future readers into the current state of this wide topic.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Chemical) / CiteScore - Q2 (Chemical Engineering (miscellaneous))
