Modelling and Optimization of Chemical Reactors

Message from the Guest Editors

The development of accurate models describing reaction and separation processes is an essential component of chemical engineering. The modelling of chemical reactors entails the description of mass, momentum, and energy transport equations, often at the same time. In addition, reactors with complex geometrical configurations are increasingly being applied in the fields, for instance, of thermochemical cycles and micro reactors. The challenge related to the modelling of reacting systems is represented mainly by the need to obtain an accurate description, while avoiding an unnecessarily high degree of complexity. The increasing ease of solutions of complex systems of equations through sophisticated CFD modelling software, along with powerful computers, has led to a tendency to develop very complete descriptions of reactors, regardless of the utility of this approach. The scope of this Special Issue is to present insightful models of chemical reactors and proposed procedures for their optimization. The models may describe the chemical or biological reactors of any scale.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto
Department of Drug Science and Technology, University of Turin, Via P.
Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
