

Special Issue

Traditional Chemometrics and Innovative Machine Learning Techniques as Tools to Assess Food Quality, Safety and Traceability

Message from the Guest Editors

The chemometric analysis in the field of food allows one to process a large number of data and responses, to extract information on the authentication of geographical or varietal origin, food quality, chemical composition, or even to trace the adulteration of commodities with high added value. In recent years, machine learning techniques have also found a wide range of uses in the food sector, offering valuable support to classical chemometric techniques for data analysis, but also for the assessment of food quality, traceability and safety. The application of AI has led to the development of techniques that are more reliable, objective, cost-effective, non-destructive and less time-consuming than traditional methods available in the industry. This Special Issue aims to collect high quality manuscripts related to the implementation of machine learning techniques, coupled with classical chemometric strategies in the food industry, to highlight the potential and applications of these efficient and non-invasive techniques. Keywords: chemometric analysis; machine learning techniques; artificial intelligence; food quality; safety; traceability

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Chemical) / CiteScore - Q2 (Chemical Engineering (miscellaneous))
